

PIPE GALLERIES URGED AS MEANS OF SAVING STREETS

Research Bureau Declares That
This Would Prevent Con-
stant Ripping of Surfaces.

In a letter sent today by the Bureau of Municipal Research to President McAneny of Manhattan Borough it is urged that pipe galleries be constructed by the city as a means of preventing the constant ripping up of street surfaces. The officers of the bureau declare that with the building of new subways and the contemplated reconstructed sewer system pipe galleries could be combined at comparatively small expense and with great ultimate profit to the city. Not only would pipe galleries obviate street surface disturbances, but the cost of maintenance and repairs would mean a saving of millions of dollars.

Agents of the bureau have just completed a survey of the pavements of Manhattan, including all the streets

south of Fifty-ninth street and the principal thoroughfares north of Fifty-ninth street. The bureau inspectors report that they find the pavements "generally in an excellent condition." A comparatively small number of streets are reported in bad condition, due to work of public service corporations and the city departments in the installation of pipes and hydrants and preparations for repaving.

Only by repairing a defect immediately upon its appearance, the letter to Mr. McAneny declares, is it possible to prevent the rapid deterioration of pavements. This plan of inspection with certain minor modifications has been adopted by you, and is now in course of installation. If efficiently operated it should enable the Bureau of Highways to master the difficult problem of maintaining the borough's pavements in a suitable condition.

Mr. McAneny is complimented upon his demonstration last winter of the fact that asphalt pavements can be repaired in cold weather.
